

# WeldMaster Portal update

Kingspan **LOGSTOR**

---

## UPDATE REGARDING LOGSTOR PRODUCT PROGRAM

---

It's once again time for new updates.

Below, please find our Product info No. 4-2023 with following updates:

- WeldMaster Portal update
- Inlet pipes of 100% recycled HDPE

Should you have any questions, please contact your usual LOGSTOR contact person or the undersigned.

Best regards

## WeldMaster Portal update

Our LOGSTOR Connect app was introduced in September 2022 with the WeldMaster Tool as the first solution on the mobile device.

We are currently working on the next solution to be introduced on the LOGSTOR Connect app: A tool for approval of shrinkable joints installation including photo documentation, that will be introduced in the second half of 2023.

For now, we have made some visual changes in the WeldMaster Portal to improve the user experience:

1. To ease your reading of the welding list, we have simplified the table structure with a fixed header row that stays at the top when you scroll the list. This allows for more weldings in the list overview but with the same functions as before.
2. The "Welding"-column has been renamed to "Welding process" as it is more indicative in terms of what the approval is ascribed to.

3. It is now possible to see what platform has been used for installation:

PDA

LOGSTOR Connect WeldMaster Tool

4. The manual checks are now color coded in the same way as the approval checkmark for a clearer overview.

5. The adjust search filter "Welding" has been changed to "Acceptance".

## Inlet pipes of 100% recycled HDPE

As a new initiative to support our vision about use of recycled materials, we have decided that our standard program for inlet pipes shall be produced by using 100% recycled HDPE from external supplier.

This initiative will cover the following:

- Double inlet pipe – fix
- Double inlet pipe – flexible
- Single inlet pipe

When we introduce this new initiative, the name will change to "InletPipe Recycled HDPE".

The recycled HDPE material that we will use for this is the same for special orders, as when we produce pre-insulated straight pipe with a casing from 100% recycled HDPE from external supplier.

Inlet pipes for flexible pipes are not covered by any European standards, so there are no restrictions in relation to this new initiative.

Customer values:

- Using recycled HDPE instead of virgin HDPE produced from oil
- The CO<sub>2</sub> saving for "single inlet pipe" is 3,4 – 6,4 kg CO<sub>2</sub> and for double inlet pipes the saving will be the double

Implementation:

New material numbers are created for the new "InletPipe Recycled HDPE".

The new "InletPipe Recycled HDPE" will be implemented in the different dimensions and types when we have sold what we have in stock of the old versions.

The Product Catalogue will be updated during Q3/Q4, 2023.
